PROFESSIONAL SUMMARY

Highly motivated Computer Science Engineering graduate (Class of 2026) with CGPA 7.88/10.0 and no backlogs — meeting Salesforce Futureforce eligibility criteria. Proven experience architecting, implementing, and testing highly scalable distributed systems and cloud-native APIs. Self-starter with strong analytical and problem-solving skills, passionate about building trusted, high-performance platforms using AI, automation frameworks, telemetry, and metrics-driven engineering. Eager to contribute as a Trailblazer on Salesforce's AI CRM platform.

TECHNICAL SKILLS

Languages & Platforms: Java, Python, C++, JavaScript, SQL — OOP, design patterns, data structures & algorithms, clean code
Architecture & Cloud: Distributed systems, microservices, cloud-native design (AWS, GCP), high-availability, fault-tolerant systems, serverless concepts, CRM platform concepts
Test Automation & Quality: Test strategy design, automation frameworks (Selenium, JUnit), unit & functional testing, code coverage metrics, CI-integrated test suites, TDD principles
Telemetry & Metrics: Operational excellence, system profiling, performance monitoring, structured logging, latency benchmarking, metrics-driven development, observability
DevOps & CI/CD: Docker, GitHub Actions, CI/CD pipelines, Git/GitHub, automated deployments, Agile/Scrum, sprint planning, cross-functional
AI & Innovation: Machine learning integration, AI-assisted development (Copilot, Codex), Agentforce concepts, Einstein AI platform awareness, data-driven product decisions

EXPERIENCE

Software & Data Engineering Intern — Edufyi, Bangalore *Oct 2025 – Dec 2025*

- **Scalable Product Development:** Architected, implemented, and tested automated ETL pipelines in Python and Java, reducing manual processing overhead by 40% and saving 15+ hours weekly — delivering a highly scalable, production-grade feature end-to-end.
- **Test Strategy & Automation Frameworks:** Designed test strategies and wrote unit/functional tests within CI/CD pipelines, driving up code coverage and automation metrics while reducing post-deployment bugs by 20% across Agile sprint cycles.
- **Telemetry & Metrics-Driven Engineering:** Implemented structured logging and performance monitoring dashboards to track pipeline health, using telemetry and operational metrics to proactively identify bottlenecks and drive continuous improvement.
- **Cross-functional Collaboration:** Worked closely with product managers and senior engineers to build features aligned with business requirements, participating in design reviews, code reviews (30+), and sprint retrospectives — exemplifying Salesforce's team-first engineering culture.

PROJECTS

Distributed Logistics Ecosystem (ParcelEase) *Java · Python · AWS · Docker · REST APIs · SQL*

- **Architect & Implement Highly Scalable Products:** Architected and implemented a multi-tiered distributed platform in Java serving 500+ concurrent users at 99.9% uptime — applying scalable cloud-native architecture, fault-tolerant design, and automated failover capabilities aligned with Salesforce's trusted platform standards.
- **Automation Framework & Test Suite:** Developed automated test suites and integration test strategies, implementing CI/CD pipelines (Docker + GitHub Actions) that reduced deployment time by 30% and ensured every release met quality and code coverage targets.
- **Telemetry & Performance Metrics:** Optimised SQL database performance through advanced indexing — reducing query latency to under 50ms — using metrics and benchmarking to drive a 35% throughput improvement and operational excellence.

Time-Series Anomaly Detection API *Python · FastAPI · AI/ML · Cloud · Telemetry*

- **Scalable API Architecture & AI Integration:** Architected a high-throughput asynchronous RESTful API in Python integrating ML-based anomaly detection, processing 5,000+ requests/second with zero dropped requests — demonstrating AI-powered product development at enterprise scale.
- **Test Automation & Code Coverage:** Designed and implemented functional test cases and automated test suites for the API, achieving full endpoint coverage and validating performance under load — reducing API latency by 50% through metrics-driven optimisation.

Skills Exchange Platform — Selenium & JUnit Automation *Java · Selenium · JUnit · White-Box Testing*

- **Test Strategy & Automation Framework:** Designed and implemented a complete Selenium WebDriver + JUnit automation framework in Eclipse, automating 100% of critical user flows — reducing manual regression time by 60% and achieving full branch coverage through white-box testing.
- **Metrics-Driven Quality Engineering:** Tracked code coverage, defect density, and automation metrics across 15+ documented defects with SLA-driven resolution — applying a rigorous, metrics-first approach to quality consistent with Salesforce's engineering standards.

EDUCATION

B.E. Computer Science & Engineering — SIMATS, Chennai | CGPA: 7.88 / 10.0 | No Backlogs *2022 – 2026*

CERTIFICATIONS & AWARDS

Software Engineering Simulation — JPMorgan Chase & Co. | **Oracle SQL Certified Specialist** | **Ethical Hacking — NPTEL** | **Best Student Award 2026**
